MIXED BULBS—GLORY MIXTURE

50 for \$3.50; 100 for \$6.00

Whenever I am not sure of the identity of a bulb it finds its way into the Glory Mixture. These bulbs are those that are picked up in the gardens after digging, and those bulbs that find their way out of the proper trays while in storage—in fact, all “STRAYS.”

As a rule I do not recommend mixtures, for it is so much more fun to know what you are growing and add to your collection year after year. But if you want only a good assortment for your garden this GLORY MIXTURE WILL SATISFY YOUR EVERY DESIRE.

HOW TO GROW GOOD GLADIOLUS

No flower gives more satisfaction with ordinary care and culture, but the superior bloom produced by special attention will amply repay for the additional care. We strongly advise growers to employ only the best cultural method possible.

It is advantageous to spade in a good covering of well rotted manure late in the fall preceding the planting. In the spring when the soil is in condition spade deeply and pulverize thoroughly. Do not get any fresh manure near them then.

Should you neglect spading in the manure in the fall, spade to a depth of 8 inches in the spring and apply a liberal dressing of bone meal thoroughly worked into the soil. Before the flower spikes appear, a good top dressing of bone meal will greatly benefit the flowers.

Plant in full sun; they will not do well under a tree, among shrubbery or against the garage or cellar wall. Put them in rows 20 to 24 inches

apart and from 3 to 5 inches apart in the row. In light soil, cover the bulbs about 4 inches and heavy soil about 3 inches. Be sure the covering soil is mellow.

Do not allow the soil to become hard or baked. Keep a dust mulch over the surface of the ground at all times. Hoe and cultivate after each wetting or rain. If the drought comes, soak the ground to a depth of 6 inches then do not water for a week.

Do not water till the plants are 6 inches above the ground.

Cut Flowers

Flower spikes should be cut when the first bloom opens. Leave at least 4 leaves (5 or 6 is better) of the plant to properly mature the bulb. The cut flowers should be given fresh water every morning and $\frac{1}{4}$ inch of the stem cut off on a long slant.

SPEND YOUR VACATION AT WINAMAC PARK, WINAMAC, INDIANA

Winamac Park occupies a forty-acre peninsula formed by the Tippecanoe river, just across the stream from the city of Winamac. The Soldier's Memorial Foot Bridge runs from the park to the foot of Main street, where is located the city's free camp ground for tourists and where flows the far-famed Winamac Artesian Well. Electric lighted cottages are for rent by the park management, there is a large dancing pavilion and refreshment stand, fishing spots in the historic Tippecanoe are convenient, beautiful auto drives along the stream are close at hand, and summer visitors will find a cordial welcome on the part of townspeople.

My trial and display gardens are at the right hand entrance to this park. Come and see me and the flowers—you are mighty welcome.
